***Department of Data Science & Computer
Applications***

Overview

This project aims to design and implement a Movie Ticket Booking System using Java Swing. The system provides users with a user-friendly GUI interface to log in, browse movies, select showtimes and seats, make payments, and receive booking confirmations. It uses event-driven programming concepts and Swing components to provide a smooth and interactive experience.

Flow Diagram

Swing Components Used

- **JFrame** : Main window for each page like Login, Signup, Booking, and Payment.
- **JPanel** : Container for organizing UI components inside the frame.
- **JLabel** : Displays text labels such as titles and field names.
- **TextField / JPasswordField** : Used for user input like username and password.
- **JButton** : Performs actions when clicked, like Login, Signup, or Pay.
- **JOptionPane** : Shows popup messages for alerts and confirmations.
- **GridBagLayout / GridLayout** : Layout managers for arranging components.
- **TitledBorder** : Adds a titled border to group and label panel sections.

Event Handling

The application uses ActionListeners for handling button clicks:

- **Login Button** : Checks credentials and navigates to movie selection.
- **Signup Button**: Registers new users after password validation.
- **Seat Buttons**: Toggle between selected and unselected using color indicators.
- **Book Button**: Proceeds to payment only if at least one seat is selected.
- **Pay Now Button**: Confirms payment, saves booking data, and opens confirmation.

Program Code

Main.java

```
public class Main {  
    public static void main(String[] args) {  
        DataManager.loadData();  
        new LoginPage();  
    }  
}
```

LoginPage.java

```
import javax.swing.*.*;  
import java.awt.*.*;  
  
public class LoginPage extends JFrame {  
    public LoginPage() {  
        setTitle("Login");  
        setSize(400, 200);  
        setDefaultCloseOperation(EXIT_ON_CLOSE);  
        setLocationRelativeTo(null);  
  
        JLabel userLabel = new JLabel("Username:");  
        JTextField userField = new JTextField(15);  
        JLabel passLabel = new JLabel("Password:");  
        JPasswordField passField = new JPasswordField(15);  
        JButton loginBtn = new JButton("Login");  
        JButton signupBtn = new JButton("Signup");  
  
        setLayout(new GridBagLayout());  
    }  
}
```

```

    }

    public void setPassword(String password) {
        this.password = password;
    }
}
```

Screenshots(Output)

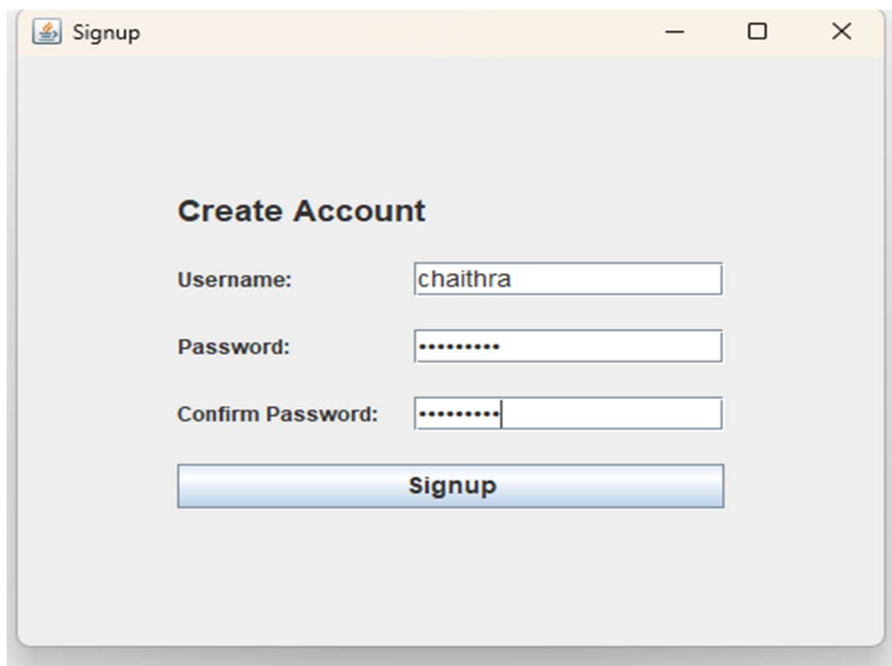

- Login Page

A screenshot of a web application window titled "Login". The window has a light gray background and a yellow title bar with standard window controls (minimize, maximize, close). The login form is centered and contains the following elements:

- Username:** A text input field containing the text "chaithra".
- Password:** A text input field with masked characters ".....".
- Login:** A blue button with white text.
- Signup:** A blue button with white text.

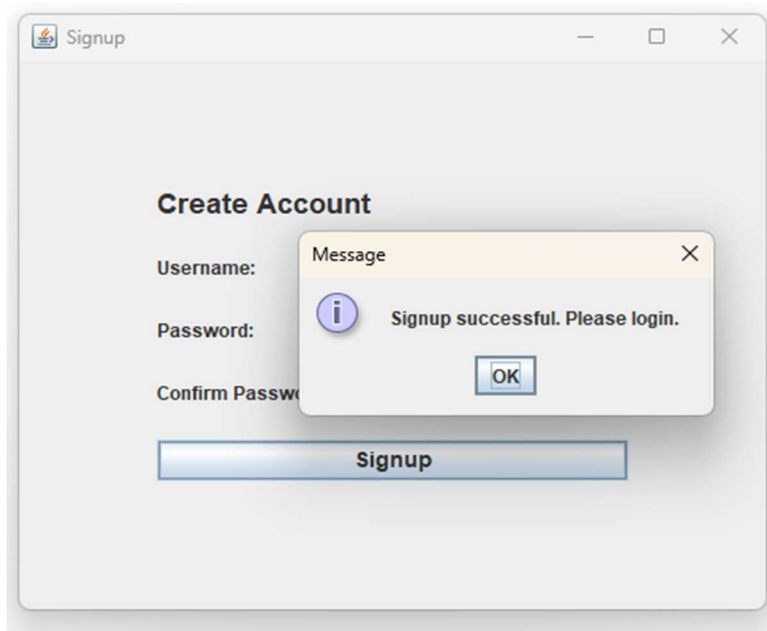

- Signup Page

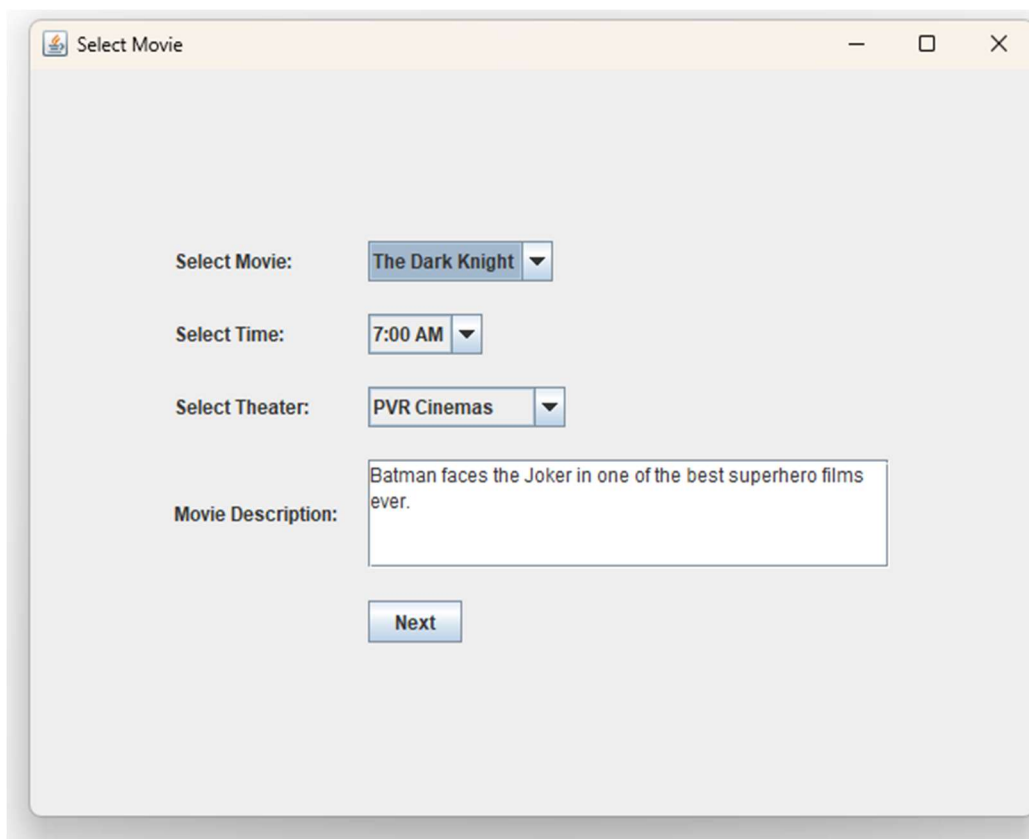

A screenshot of a web application window titled "Signup". The window has a light gray background and a yellow title bar with standard window controls (minimize, maximize, close). The signup form is titled "Create Account" and contains the following elements:

- Create Account:** A section header in bold black text.
- Username:** A text input field containing the text "chaithra".
- Password:** A text input field with masked characters ".....".
- Confirm Password:** A text input field with masked characters ".....".
- Signup:** A wide blue button with white text.

- **Signup Successful**

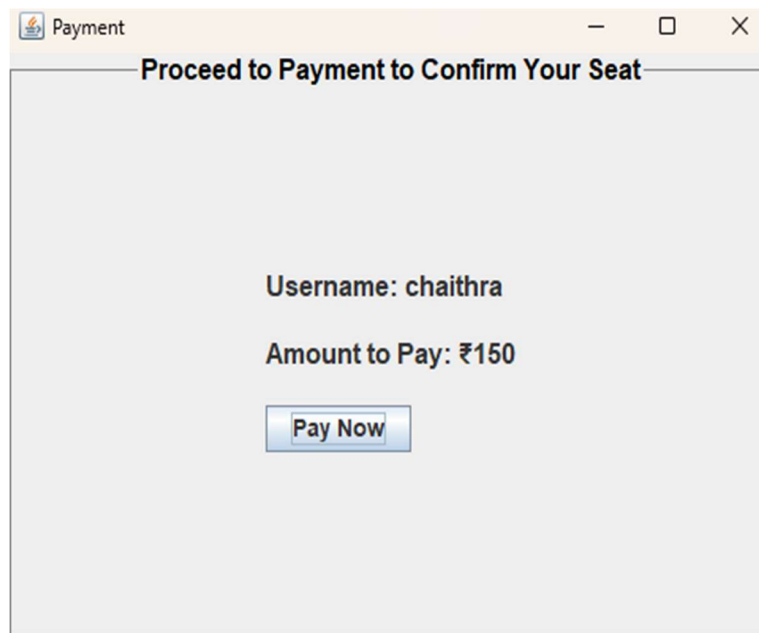

- **Ticket Booking Page**

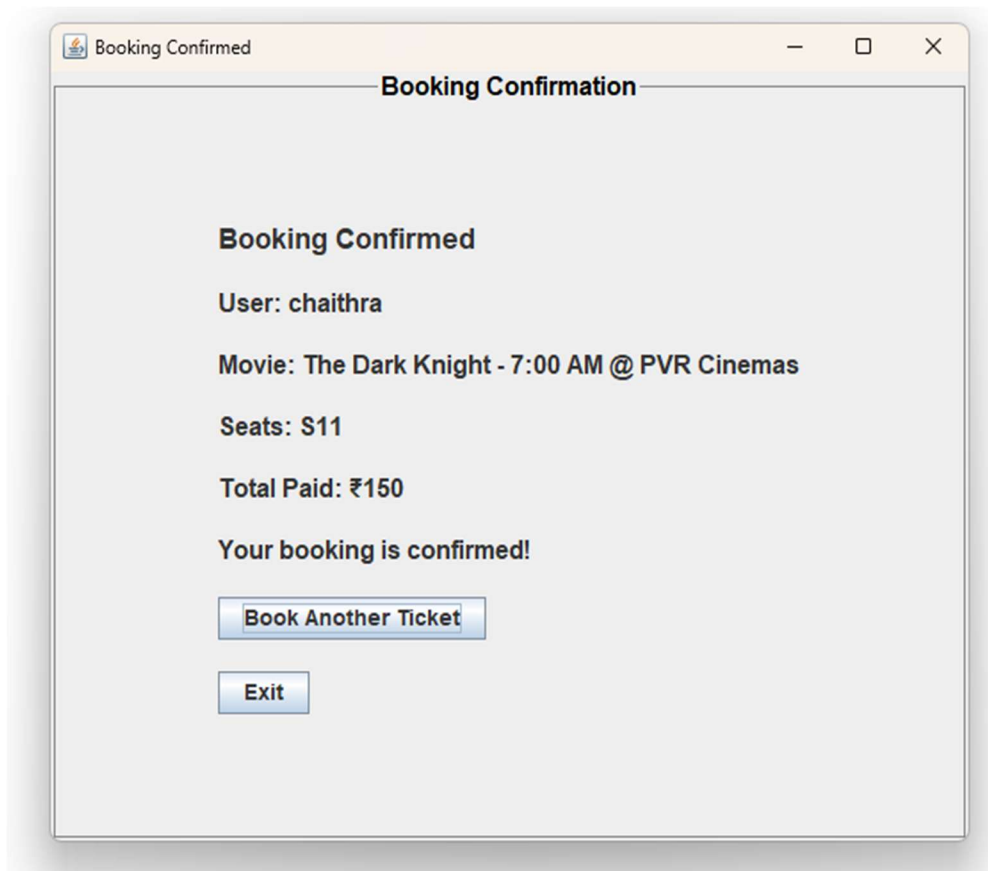

- **SeatBooking Page**

- **Payment Page**

- **Booking Confirmed**
